Highest Model Attention Region

Region identified using the highest Grad-CAM activation. This area contributed most strongly to the model's prediction.

Explainable AI Analysis

GRAD-CAM ANALYSIS

Prediction: PNEUMONIA

Confidence: 100.00%

Attention Statistics

- High Attention (Red): 4.08%
- Medium Attention (Yellow): 22.45%
- Moderate Attention (Green): 32.65%
- Low Attention (Blue): 40.82%

POSSIBLE REGION OF INTEREST

The red bounding box highlights the area with the strongest Grad-CAM activation.

This region represents the strongest model attention and contributed most strongly to the prediction.

INTERPRETATION

Red regions indicate image areas that contributed most strongly to the pneumonia prediction.

Yellow regions indicate moderate contribution.

Green regions indicate supporting image features.

Blue regions indicate areas with minimal influence on the final decision.

Note: The highlighted ROI represents the area with the highest Grad-CAM activation and may correspond to pneumonia-related abnormalities. It should be interpreted as a model attention region rather than a confirmed medical diagnosis.
